

# **AUTOMATED TESTING REPORT**

**Test Project:** 18127014\_Huynh\_Nhat\_Nam

**Name:** Huỳnh Nhật Nam

**Student's ID:** 18127014

**Question:** why and when do we use automated testing?

**Answer:**

- We use automated testing because:

- + It's faster and more accurate than manual testing
  - + It's more consistent
  - + It has higher test coverage than manual testing
  - + It can be reused
  - + It eliminates human errors when testing
- => automated testing saves cost and time

- We use automated testing when:

- + we need to run the same test cases on more than one machine at the same time
- + we need to run test cases on a large amount of inputs
- + there is regression testing
- + the number of test cases is high
